

**TITLE: Equal Learning
Procedure and Rotation
Opportunities**

POLICY NO: R-6

EFFECTIVE DATE: 12-15-17

**REVISION DATE: Revised
and approved December
15, 2017**

Purpose:

The purpose of this policy is to inform the student radiographer of the equal learning opportunities of the radiography program on gender specific procedures or rotations.

Policy:

The AS in Radiography Program strives to provide equal learning opportunities in all areas of program curriculum. Exclusion of student participation based on gender is considered discriminatory. Areas of concern for equal learning opportunities are associated with the following patient procedures or rotations:

1. Cystourethrography (voiding and static)
2. Hysterosalpingography
3. Mammography

All students must be given the opportunity to participate in cystourethrograms, hysterosalpingograms procedures and mammography rotations. In the event that students are restricted from participation at a particular clinical site, the Clinical Coordinator will make every effort to find another clinical site so that the student can participate in these procedures or rotations. However, the program cannot override the clinical site's policies for gender specific procedures.

*The student and the supervising technologist may be required to secure and document patient consent to observe/participate prior to the start of the exam.
